Coming Soon Homepage Prompt (Cursos Agent)

Generate a temporary Coming Soon homepage that:

1. Auto-installs at project bootstrap (before any other modules, routes, or pages load).

2. Uses the default site design and components from the PromptForge v3 UI (blueprint inside promptforge.zip).

3. Displays a signup form for the waiting list:

- On submit, insert participant data (email, name, created_at) into Supabase → table waitlist_signups.

- Validate email, prevent duplicates.

- Persist with RLS (multi-tenant, org-scoped).

4. Shows a thank-you page after submission, styled in the same UI theme.

5. Must be fully isolated:

- No interference with other routes, modules, or systems.

- Can be enabled/disabled by a single toggle/flag (COMING_SOON=true in .env).

- When disabled, the system runs normally without residual effects.

6. Must be easy to install and remove:

- One API endpoint: /api/toggle-coming-soon (admin-only) → flips state in Supabase table site_settings.

- State persisted per org/project (projects table).

7. Bundle export:

- Save the generated Coming Soon prompt + UI spec as bundle (.txt/.md/.json/.pdf) in Supabase Storage.

- Apply checksum + manifest for audit.
